Focal points for SIMONA AG at IFAT 2008

New SIMOFUSE ® brand, industrial piping systems and trenchless pipe installation

Kirn, April 14, 2008. SIMONA AG, a leading manufacturer of plastic piping systems, will be unveiling a range of new products at this year's IFAT trade fair, focusing in particular on solutions for the installation and repair of wastewater systems and pressure piping systems.

SIMOFUSE ® joining technology

The newly created SIMOFUSE ® brand is synonymous with the very latest in joining technology for plastic piping systems. With the help of specially designed electrofusion spirals integrated within the surface of the pipe ends, pipes and fittings can be welded together to produce a homogeneous, high-strength joint. The electrofusion method applied within this area conforms with the guidelines of Deutsche Verband für Schweißen und verwandte Verfahren e.V. (German Association of Welding and Associated Processes), thus guaranteeing results of the highest possible quality. With the help of SIMOFUSE ®, operators can install absolutely leak-proof pipelines in a single material used consistently throughout the system.

Piping systems for industrial wastewater

The company will also be showcasing a piping system made of SIMONA ® PP-H AlphaPlus at IFAT, designed specifically for the disposal of high-temperature wastewater containing chemical pollutants. This new generation of polypropylene features an ultra-fine and stable alpha-crystalline structure. Pipes, double-containment pipes, fittings and shafts made of SIMONA ® PP-H AlphaPlus offer a range of new opportunities within the industrial field.

Solutions for trenchless pipe installation

With the help of a well-structured, practice-oriented presentation, SIMONA will outline the complex processes and procedures associated with pipe laying. Trenchless installation makes enormous demands on pipe materials. SIMONA's extensive product range includes a number of well-conceived solutions tailored precisely to these requirements. Alongside standard pipes made of PE 80 and PE 100, the company supplies PE 100 pipes with advanced safety features and modified protective jackets – the perfect choice for modern installation methods such as pipe bursting, relining and horizontal wash-boring.

Large pipes up to 1,200 mm

Owing to significant investments made in new machinery at the company's production facility in Ringsheim, Germany, SIMONA is now able to supply extruded pipes with outside diameters of up to 1,200 mm. In taking this well-judged decision to expand its product portfolio, SIMONA has responded to market demands within this specific area. Following the latest investment in SIMONA AG's future, the company is now well positioned to take up new challenges in the international business arena.
