SIMONA at Anuga Food Tec 2012 – semi-finished products and finished parts for the food industry

Kirn, 11/01/2012. In 2012 SIMONA will attend the international trade fair for food and drink technology “Anuga Food Tec“ in Cologne (March 27-30, 2012) for the first time. The range of products on display consists of semi-finished products and finished parts, such as profiles, chain guides, sliding rails, guide rails and sprocket wheels, which – for example – are made of dehoplast® PE-1000 and dehoplast® PE-55. This includes the new product dehoplast® x-detect, a detectable semi-finished plastic made of ultrahigh-molecular-weight polyethylene with metal additives. Thereby SIMONA meets the demands of special guidelines for security in the food industry.

SIMONA supplies finished parts for a vast range of applications within the field of mechanical and transport engineering. Beyond the standardized range, SIMONA is committed to providing a highly personalized service for finished-parts production. Using state-of-the-art profiling machines, it is possible to produce fully customized solutions based on particular specifications. Customized products designed according to customer's specifications are manufactured with the help of high-performance CNC machining centers – combining flexibility with precision. In addition to supplying an extensive range of materials from the existing portfolio, SIMONA is able to develop materials with specialist properties and thus create tailor-made product solutions in close cooperation with the customer's engineering teams.

SIMONA's contact person at Anuga Food Tec 2012 – Hall 10.1, Booth No. G-061 – will be:

Mr. Shahram Adjili
BU Mechanical Engineering & Transport
